

- PR description missing / insufficient
- License headers are wrong or outdated please update them
- TODO and code commented out has to be removed and or resolved
- System Outs has to be replace with proper logging
- exception handling has to be implemented
- Formating seems incositent, please apply Eclipse Formating profile
- JavaDoc is missing
- dont use enum for singeltons, either use directly static methods or proper instances
- "team" is not a suitable subfolder, please use the bundles subfolder
- Code has to be EPL 2.0 and contains contributions from other people might have to be properly vetted
- Uses service or plugin.xml to register adapter
- Observer is deprecated in java 9 replace with something else
- Avoid Serializable classes its is unclear why this is needed here as it imposes security risks
- Dont use Swing for UI components
- Message externalization missing in some places
- Handling exceptions by their message content is questionable
- Use ILog.get(...) directly instead of LogUtil
- Dont supress warnings, fix them
- Replace repetitive static acces by local variable
- Dont init fields wih their default values
- Don't mix JUnit 4 and 5 Annotations, use JUnit 5 consitently
